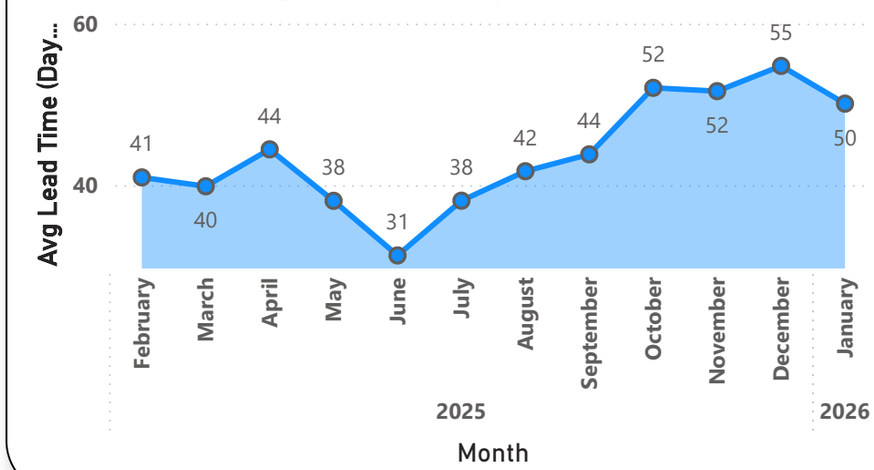
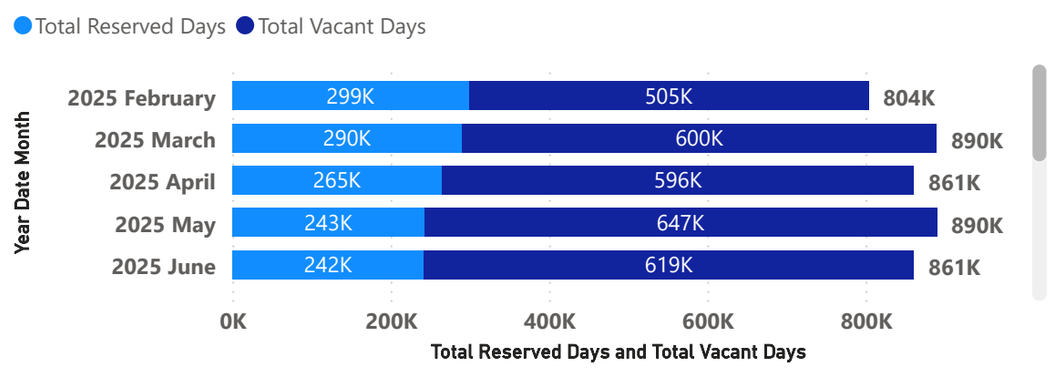
Higher lead time indicates forward booking behavior —> opportunity to increase rates proactively

Avg Lead Time (Days) vs Month



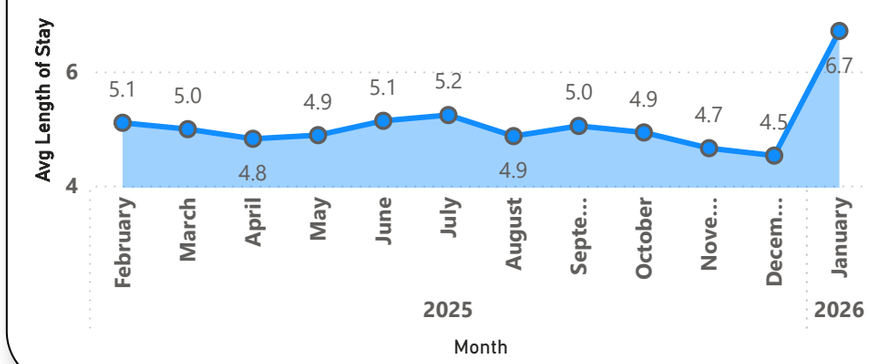
Significant vacancy gaps indicate missed revenue opportunities — requires targeted pricing and promotions

Vacancy vs Reserved Stacked Bar



Increasing length of stay enhances RevPAR — leverage stay-based pricing strategies during low occupancy months

Avg Length of Stay vs Month



💡 INSIGHTS

💰 Revenue Driver

$366M
Total Revenue (USD)

Entire homes & villas contribute ~52% of total revenue.

Entire homes & villas drive ~52% of revenue — prioritize these for supply and pricing optimization.

🏠 Occupancy Insight

29.1%
Avg Occupancy %

"Low occupancy (~29%) indicates underutilized inventory — opportunity to improve through pricing and stay strategy"

"Peak months show moderate occupancy (~30%) — revenue growth driven primarily by ADR, not volume"

$ Pricing Power Insight

$121.27
ADR (USD)

RevPAR remains low (~$35) due to underutilized occupancy despite strong ADR

Pricing power is the primary revenue driver — higher ADR (not occupancy) explains peak revenue periods

📅 Demand Predictability Insight

44
Avg Lead Time (Days)

High lead time (~44 days) enables early price optimization and stricter booking policies

Revenue spikes in peak periods are driven by ADR increases despite stable occupancy

💡 **Revenue growth in Bali is driven by pricing power (ADR), not occupancy — highlighting a premium, demand-driven market.**

✅ Recommendations

1. Adopt dynamic pricing — optimize ADR based on lead time and demand signals, not just seasonality.
2. Accelerate Superhost conversion — unlock pricing premium with stronger occupancy performance.
3. Optimize stay restrictions — reduce minimum nights in low-demand periods to unlock occupancy.
4. Prioritize entire home/villa inventory — highest revenue efficiency and guest demand.
